CentralPal

One intelligence serving many lines

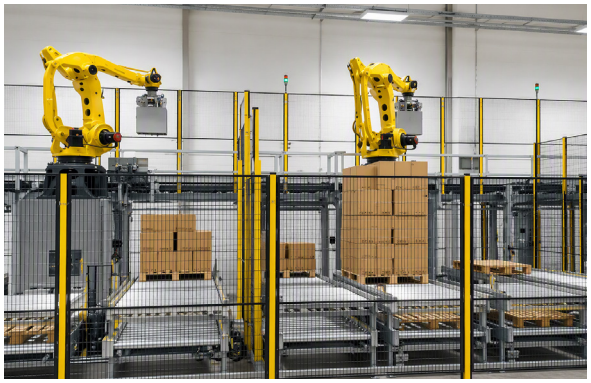
A robotic cell that consolidates palletizing for multiple production lines, handling multiple product flows, up to 6 pallet positions per robot with advanced t control.

Technical Specification

Application	Central palletizing (multi-line)
Performance	Multi-line consolidation
Configuration	Up to 6 pallet positions
Automation & Control	Robot Config Advanced
Integration	Conveyors, stackers, destackers, pallet wrapper and printers
Scalability	From few lines to full plant

Key highlights

- Line consolidation into one cell
- Space & throughput optimization
- Consistent pallet quality across
- all lines



Ideal for:
Plants running several lines that want to centralize end-of-line palletizing, reduce floor space and robot count, and keep pallet quality uniform - scala-ble from a few lines up to full-plant coverage.
