Mounting hardware for guide rail brackets etc. must be ordered separately, unless otherwise noted.

Guide rail components

Guide rails are used to guide the products being conveyed and also to prevent them from falling off the conveyor. The conveyor system includes a versatile system of guide rails and guide rail brackets which make it possible to accommodate many different product sizes and shapes. Guide rail brackets are available in fixed or adjustable configurations.

Most guide rail components in this catalogue section can be used with any of the sizes XS, X45 H, X65, X85, XH, XK, X180/X300 and WL.

Note however that the distance from the T-slot in the conveyor beam to the top of chain (TOC) varies between conveyor platforms and with the chain selection. Special guide rail systems are used for the X65, X85 and XK pallet systems.

Note

Mounting hardware for guide rail brackets etc. must be ordered separately, unless otherwise noted.

Adjustable guide rail components

The guide rail components assortment includes several adjustable guide rail bracket components which allow manual width adjustment without the use of tools, for reduced setup time. A guide rail system for automatic adjustment of the track width has been developed. See page 313.

Distance between brackets

The distance between guide rail brackets depends on the side forces to be expected, and on the guide rail type and material. In buffer conveyors with side forces, much shorter distances between brackets are required than in non-buffering applications. The distance should be somewhere between 0,3 m and 1,5 m.
Track width calculations

Basic parameters
The calculations of resulting track width require insertion of values for beam width \( W_b \) and spacer width \( A \). See Tables 1 and 2. \( A \) is the sum of all spacers on one side.

**Table 1. Beam width**

<table>

Parameters \( W_b \) and \( A \)

Using guide rail bracket support XLRF 42×18 V/VD

The following formula can be used to calculate the track width for a specific symmetrical combination of supports, clamps, and guide rails. For \( W_b \) and \( A \): see Tables 1 and 2 in “Basic parameters”; page 290. For parameter \( B \): see Tables 3 and 4.

\[
W = W_b + 2A + 80 - 2B
\]

**Table 3. Parameter \( B \) when using support type XLRF 42×18 V/VD and XLRK/XLRL guide rail clamps**

<table>
<thead>

<td>64–</td>
<td>58–</td>
</tr>
</tbody>
</table>

Note
The illustration shows a design with vertical 18 mm tube and cross connector XLRX 18 X. An alternative is to use guide rail clamp support Type CA (XLRL 18×... CA). The \( B \) values are the same.
Clamp type XLRF 18 CE is used in combination with a piece of horizontal 18 mm tube XLRR ...×18 C.

**Table 4. Parameter \( B \) when using support type XLRF 42×18 V/VD and quick release guide rail clamp support XLRL 18×97 CQ**

<table>
<thead>
<tr>
<th>Guide rail</th>
<th>10 mm</th>
<th>15 mm</th>
<th>15 + 2 mm</th>
<th>18 mm</th>
</tr>
</thead>
</table>

*Suitable for stainless steel applications.

Note.
Guide rail clamp XLKR 12×100 D69 cannot be used with the quick release guide rail clamp support.
Track width calculations (continued)

Using guide rail bracket support XLRF 42×62 A35/110

The following formula can be used to calculate the track width for a specific symmetrical combination of supports, clamps, and guide rails (see illustrations). For $W_B$ and $A$: see Table 1 and 2. For parameter $B$: see Table 5.

$$W = W_B + 2A + 84 – 2B$$

Table 5. Parameter B when using support type XLRF 42×62 A35/110

<table>
<thead>
<tr>
<th>Guide rail</th>
<th>10 mm</th>
<th>15 mm</th>
<th>18 mm</th>
</tr>
</thead>
<tbody>
<tr>
<td>XLRK 18×40 C</td>
<td>28–43</td>
<td>33–48</td>
<td>35–50</td>
</tr>
<tr>
<td>XLRK 18×60 C</td>
<td>28–63</td>
<td>33–68</td>
<td>35–70</td>
</tr>
<tr>
<td>XLRK 18×80 C</td>

<td>35–90</td>
</tr>
<tr>
<td>XLRK 18 CE</td>
<td>44–</td>
<td>49–</td>
<td>51–</td>
</tr>
</tbody>
</table>

Note

The maximum $B$ value for XLRK 18×40/60/80 C applies to the guide rail clamp installed at the top level. At lower levels the maximum $B$ value is up to 5 mm smaller.

The lowest level of XLRF 42×62 A35/110 cannot be used in an X180 conveyor for track widths smaller than 170 mm.

XLRK 18 CE is used in combination with 18 mm tube XLRR ...x18 C.

Using guide rail bracket support XLRF 30×71 K

The following formula can be used to calculate the track width for a specific symmetrical combination of supports, clamps, and guide rails. For $W_B$ and $A$: see Table 1 and 2. For parameter $B$: see Table 6.

$$W = W_B + 2A + 90 – 2B$$

Table 6. Parameter B when using support type XLRF 30×71 K

<table>
<thead>
<tr>

Connecting sleeve

**Connecting sleeve**

Including set screws. For connecting two 10 mm or 15 mm XLRS guide rails end to end.

**Flexible roller module**

Flexible roller module

Length 348 mm

Mounting to profile 5050889: SK6SS 4×20

**Rod for roller module profile**

Rod for roller module profile

∅12 mm

Mounting to roller module profile 5050889: XCAN 8, BRB 8.4×16.

For use with guide rail bracket support Type K.

**Roller module profile**

For use with roller module 5050902 A. Use connecting strip XLCJ 5×140 for joints.
Guide discs

Guide discs are used in place of conventional guide rail for the inner bend of Plain bends/Bend drive units. The guide discs are snap-fitted onto the large discs. The guide discs correspond to fixed guide rail brackets as shown in the following tables. Other combinations are possible if a non-symmetrical track can be accepted.

Conveyor system XS. Outer guide rail: 10 mm

W=28 mm Fig. A
W=40 mm Fig. B
W=49 mm Fig. B
W=53 mm Fig. B
W=65 mm Fig. B
W=90 mm Fig. B

Note. All brackets except 16 mm and 28 mm types can take angle plates when used with X85 and XH conveyors. (XLRB 40×42: angle plate XLRP 3/6 only). Although XLRB ..×42 can be used with X180/X300 conveyors, the resulting height of the guide rail is often insufficient for safe guidance, especially for the wider brackets. Use adjustable polyamide brackets or built-up brackets if type XLRB ..×54 are not suitable.

Mounting to beam: XLAT 17, XLAN 8, BRB 8.4×16.

**Distance piece (aluminium)**

Distance piece (aluminium) thickness 6.25 mm

XLRD 6

Not for conveyor system XK (use XLRD 6 C).
Suitable, longer T-bolts: see Fasteners.
Note. Must be ordered in multiples of 10

**Distance piece (aluminium) for conveyor system XK**

XLRD 6 C

Distance piece (polyamide)

Distance piece (polyamide)  
Thickness 6,25 mm  
**XLRD 6 P**  
*Can hold angle plates (X65 only)*  
*Not for conveyor system XK (use XLRD 6 C).*  
*Suitable, longer T-bolts: see Fasteners.*  
*Note. Must be ordered in multiples of 10*

Spring pin for guide rail bracket

Spring pin for guide rail bracket  
**XLAP 28**  
The spring pins are used to secure the guide rails to the guide rail brackets.  
*Note. Must be ordered in multiples of 50*
Fixed guide rail brackets, polyamide

**Fixed guide rail bracket, polyamide (XS, X65)**

Can be used with XS and X65 conveyor beam. Track widths: see table on page 299. Mounting to beam: XLAT 17, XLAN 8, BRB 8.4×16. Do not overtighten (max torque: 10 Nm).

**Spacer for guide rail bracket, polyamide**

Distance piece Type A

- Polyamide
  - D = 6 mm
  - D = 18 mm

Spacer beams are also available. See page 305. Note. Must be ordered in multiples of 10

**Bracket support components, polyamide**

**Fixed guide rail bracket, polyamide (XS, X65, XH, X180/X300)**

Can be used with XS, X65, X85, XH, X180/X300 conveyor beam. Track widths: see table on page 299. Mounting to beam: XLAT 17, XLAN 8, BRB 8.4×16. Do not overtighten (max torque: 10 Nm).

**Guide rail bracket support Type A35**

Guide rail bracket support

- Polyamide
  - 42 (XK)
  - 54 (X85, XH)
  - 50 (XB)
  - 60 (XS, XL)

To be used with guide rail clamp XLRK 18×40/60/80 C. For 1–2 guide rail levels. Including screw and nut. Screw can be replaced by star knob XLAR 6×20. Mounting to beam: XLAT 17, XLAN 8, BRB 8.4×16. Use socket wrench with 3/8” drive. Do not overtighten (max torque: 10 Nm). Note. Always install dummy plugs XLAK 18 (page 304) in unused clamp positions to ensure positive locking of the adjacent clamp.

**Spacer beams are also available. See page 305. Note. Must be ordered in multiples of 10**
Bracket support components, polyamide (continued)

Guide rail bracket support Type A110

Guide rail bracket support XLRF 42×62 A110
To be used with guide rail clamp XLRK 18×40/60/80 C. For 1–4 guide rail levels. Including screw and nut. Screw can be replaced by star knob XLAR 6×20
Mounting to beam: XLAT 17, XLAN 8, BRB 8.4×16
Use socket wrench with 3/8" drive. Do not overtighten (max torque: 10 Nm).
Note. Always install dummy plugs XLAK 18 (page 304) in unused clamp positions to ensure positive locking of the adjacent clamp.

Guide rail bracket support Type V

Guide rail bracket support XLRF 42×18 V
To be used with vertical 18 mm tube or rod, or guide rail clamp XLR/LXLRC 18×110 C. or with quick release clamp XLR/LXLRC 18×97 CQ.
Mounting to beam: XLAT 17, XLAN 8, BRB 8.4×16
Use socket wrench with 3/8" drive. Do not overtighten (max torque: 10 Nm).
Clamp screw can be replaced by star knob XLAR 6×20

Guide rail bracket support Type VD

Guide rail bracket support XLRF 40×18 VD
To be used with vertical 18 mm tube or rod, or guide rail clamp XLR/LXLRC 18×110 C.
Mounting to beam: 2 each of MC6S 8×14, XLAQ 8, BRB 8.4×16

Guide rail bracket support Type K

Guide rail bracket support with star knob XLRF 30×71 K
To be used with guide rail clamps based on 12 mm steel rods, e.g. XLRK 12×100 D69, 5050986, or 5050887 (for roller module).
Mounting to beam: XLAT 17, XLAN 8, BRB 8.4×16

Dummy plug

Dummy plug for XLRF 42×62 A35/110
XLAK 18
Note. Must be ordered in multiples of 10

Guide rail bracket support with star knob XLRF 30×71 K
To be used with guide rail clamps based on 12 mm steel rods, e.g. XLRK 12×100 D69, 5050986, or 5050887 (for roller module).
Mounting to beam: XLAT 17, XLAN 8, BRB 8.4×16
Bracket support components, Zinc

Reinforced Guide rail bracket support Type VH

![Diagram of reinforced guide rail bracket support Type VH]

**XLRF 42×18 VH**

To be used with vertical 18 mm tube or rod, guide rail clamp XLRL/XLRC 18×110 C, or with quick release clamp XLRL 18×97 CQ.

Mounting to beam: XLAT 17, XLAN 8, BRB 8.4×16

Use socket wrench with 3/8" drive.

Do not overtighten (max torque: 10 Nm).

Guide rail clamps

Guide rail clamp 1

Guide rail clamp 1
L=40 mm
L=60 mm
L=80 mm
Including screw and nut
For use with guide rail bracket supports Type A35/A110, guide rail clamp supports Type CA, or cross connector XLRX 18 X.

Guide rail clamp 2

Guide rail clamp 2
XLRL 18×110 C
Including screw. To be used directly with guide rail bracket supports XLRF 42×18 V or XLRF 40×18 VD.

Guide rail clamp 3

Guide rail clamp 3
XLRK 18 CE
Including screw and nut. For use with 18 mm tube XLRR ...×18 C.

Guide rail clamp for double track conveyor

Guide rail clamp for double track conveyor
XLRC 18×110 C
Including screw and nut. Suitable for use with cross connector XLRX 18 X and a crossing 18 mm aluminium tube above the double track.

Guide rail clamp 4

Guide rail clamp 4
XLRK 12 CE
Including screw and nut. For use with 12 mm guide rail clamp rod 5051168 or 5050986. Suitable guide rail types: XLR 23 or 18 mm tube/rod.

Guide rail clamp 5

Guide rail clamp 5
XLRK 12 DE
Including stainless steel screw and nut. For use with 12 mm guide rail clamp rod 5051168 or 5050986. Suitable guide rail type: 12 mm steel rod type 5048965.

Guide rail clamp rod with grooves, 12 mm

Guide rail clamp rod with grooves
Stainless steel
5051168
For use with guide rail clamps XLRK 12 CE/DE and clamp support XLRL 18×97 CQ.
Guide rail clamps (continued)

Guide rail clamp, double

Guide rail clamp, double

Guide rail clamp rod, plain, 12 mm

Guide rail clamp rod, plain

Stainless steel

Guide rail clamp rod, plain

5050986

For use with guide rail clamp XLRK 12 CE/DE and bracket support XLRF 30×71 K.

Guide rail clamp rod, double

Guide rail clamp, double

Stainless steel

Guide rail clamp, double

XLRK 12×100 D69

Including stainless steel rod, screw and nut. Suitable guide rail type: 12 mm steel rod type 5048965. For use with bracket support XLRF 30×71 K.

Guide rail support tube, aluminium

Guide rail support tube

Aluminium

Length 3 m (3030 ±5 mm)

Length to order (30- 3000 mm)

End cap

Note. Must be ordered in multiples of 10

The tube can also be used as guide rail in combination with suitable guide rail clamps.

Corner connector

Corner connector

Including screws and nuts. For use with 18 mm aluminium tube type XLRR ..× 18 C.

Cross connector

Cross connector

Including screws and nuts. For use with 18 mm aluminium tube type XLRR ..× 18 C and/or guide rail clamps XLR/LXC 18×110 C.

Can be used with star knob XLAR 6×20 for easy re-adjustment

Star knob

Star knob

M6

Note. Must be ordered in multiples of 10

To be used with XLRF 42×18 V, XLRF 42×62 A35/110, and XLRX 18 X.
Guide rails system X45, X45H and X65

Width adjustment

Width adjustment XURA 30x41x37 and XLRA 30x41x50 A

When using XURA 30x41x37 the minimum A width is 2 mm and the maximum B width is 84 mm
When using XLRA 30x41x50 A the minimum A width is 34 mm and the maximum B width is 104 mm

Width adjustment XURA 40x41x37 and XLRA 40x41x50 A

When using XURA 40x41x37 the minimum A width is 20 mm and the maximum B width is 102 mm
When using XLRA 40x41x50 A the minimum A width is 50 mm and the maximum B width is 120 mm

Width scale

The guide rail bracket has an adjustment scale which can be used as a reference when adjusting the guide rails to correct width
Using Guide rail cover

Guide rail cover XLRT 3x23, XLRT 3x23E

When not using the Guide rail cover the guide rail can be orientated with the long flange down.

When using the Guide rail cover the rail is to be orientated with the long flange up.

Small beam 24×34
- Beam 24 mm x 34 mm
- Length 3 m (3030 ±5 mm)
- Length to order (30- 3000 mm)
- End cap for XCBB 3×24×34

Inner fitting 90°
- Including T-bolt, nut, set screw
- Note. Must be ordered in multiples of 10

Small beam 24×44
- Beam 24 mm x 44 mm
- Length 3 m (3030 ±5 mm)
- Length to order (30- 3000 mm)
- End cap for XCBB 3×24×44

Inner fitting 90°
- Including screws
- Note. Must be ordered in multiples of 10

Guide rail bracket
- Including M8 screw and square nut

Corner fitting 90°
- Including set screws
- Note. Must be ordered in multiples of 10

Spring pin for guide rail bracket
- Note. Must be ordered in multiples of 50
Guide rail system for easy adjustment of track width

The automatic adjustable guiding system provides a very flexible way to add width adjustment for conveyors in a production line. The system offers easy automatic resetting of product guiding systems in production flows. The effect is increased line efficiency and safe product distribution throughout the line.

The system has a modular design and consists of guide units for the guiding, control boxes for the control of the guide units and junction boxes for power supply. The system can be linked to the line control system and one control box can control up to 132 or 220 guide units.

Standard features
- Automatic resetting for different product sizes
- Easy to install and expand
- Easy to integrate with existing installations
- Safe
- Each unit is self-driven with high accuracy
- Available in versions with or without position feedback.

Standard products
A system includes the following standard products:
- Guide units (standard or feedback type, basic or heavy version)
- Guide rail components
- Control box (Type 1/2/2b)
- Junction box

Guide unit (GU)
The guide unit has a built-in gear motor that adjusts the guide rails in and out by means of a rotating threaded shaft. The 24 V AC motor provides high enough force for width adjustment but still low enough force to stop if something gets jammed.

Each guide unit includes a cable that is daisy chained to the next guide unit. The synchronous AC motors ensure that the guide units move in parallel.

The feedback version (suffix F) has two sensors, one at the outer position for resetting, and one which counts pulses as the threaded shaft rotates, to indicate the current position. Cables from the sensors are connected to the fieldbus module in the control box.

System reset is done by running the guide units until all guide rails are in the maximum width position.

Basic GU version
The basic version is designed to be positioned above the conveyor track. It comes with ∅12 mm vertical bars in two lengths: 196 mm and 296 mm and includes a 2 m GU cable. Recommended distance between guide units is 1 m. Using standard FlexLink’s guide rail components, it is possible to get two guide rail configurations: A and B:
Guide rail system for easy adjustment of track width (continued)

Control system

- The basic control box, Type 1, for manual setting has a switch with three positions: IN/0/OUT.

- The advanced control box, Type 2, automatic setting, has a built-in fieldbus module, which receives control signals from the conveyor system’s PLC.

- Control box Type 2b has provisions for installing customer specified communications, such as any preferred type of fieldbus module, or hardwired communications.

In a small system, one Type 1 or Type 2 control box controls a GU group. A larger system can be built by adding junction boxes. Each additional GU group needs a junction box. Systems larger than this require an extra control box.

Position feedback system

The track width can be easily controlled from an operator panel if a control box Type 2 is used in combination with a GU made for position feedback (see Guide unit above). Only one such GU is required in a line.

Junction box

In addition to one GU group, a control box can have a maximum of 10 junction boxes (5 in each direction). Each junction box can control one GU group. A group of basic guide units can include up to 20 guide units, whereas a heavy GU group can include maximum 12 guide units. This means a total of 220 basic guide units.
Automatic guiding system components

Guide unit

Guide unit, including horizontal beam XFBM 30, no feedback

Guide unit 284×196 C  XLRQ 284×196 C
Guide unit 455×196 C  XLRQ 455×196 C
Guide unit 284×296 C  XLRQ 284×296 C
Guide unit 455×296 C  XLRQ 455×296 C

Guide unit, including horizontal beam XFBM 30, with position feedback

Guide unit 284×196 CF  XLRQ 284×196 CF
Guide unit 455×196 CF  XLRQ 455×196 CF
Guide unit 284×296 CF  XLRQ 284×296 CF
Guide unit 455×296 CF  XLRQ 455×296 CF

Includes a 2 m GU cable. Feedback version (suffix BF) includes the necessary sensors.

Distance piece

Adapter for fitting cross connectors or guide rail clamps to the Ø12 mm vertical bars of the guide units.

Extra GU cable

Cable, 2 m  5057678
Cable, 3 m  5057691

Compatibility with previous GU models

Due to a speed difference, GU types XLRQ...B/XLRQ...B should not be mixed with the previous types without B in the suffix in a line controlled by a common control unit.
Automatic guiding system components (continued)

Guide rails in bends

Example: 90° plain bend:
The guide rail is divided into 45° segments. Two guide units are used for each 45° segment. These guide units must be mounted in parallel. The mid-point of each segment (P) will move with the same accuracy as the straight guide rail sections. If higher accuracy is needed, a 90° bend can be divided into three 30° sections.

Customer specified communications
